

## AL-RAU Alarm Interface Unit

The digital alarm unit has been specifically designed to provide remote visual and audible alarm warning for HVAC systems / plant.

Five seconds (variable up to 5minutes) after receiving a 24v ac/dc signal the unit will go into alarm , with both sounder and flashing LED's operating.

Pushing the left pushbutton will silence the sounder for 15 minutes, after which it will sound again.

The LED's will continue to flash so long as the signal remains. Pushing and holding in the right hand push button tests the unit.

### Features

- 24V ac/dc operation
- Pre-wireable base
- Unit plugs onto base after decoration.
- Mute facility
- Alarm delay time
- Manual test facility

- Wall or control panel mountable
