ILK transmitters are designed for detecting and controlling VOC (Volatile Organic Compound) level, temperature and humidity inside ventilation ducts. MEMS sensing technology ensures accurate and durable VOC measurement that is related to the CO₂ level. With the VOC level information the demand based ventilation can be controlled effectively.

The VOC sensor detects wide variety of hydrocarbons such as cigarette smoke, exhaled breathing air, solvent vapours, building material emissions and cleaning agent vapours.

The measurement values scroll on the N model display. The wanted value can be locked to view continuously.

The control output can be controlled either according to a one measurement value or according to the maximum selection of all values. The controller settings can be changed by using the ML-SER tool.

The transmitter can be equipped with a HD-R relay (24 Vac, 1 A). The relay output can be controlled either according to a one measurement value or according to the all measured values. The relay switching point can be adjusted by using ML-SER tool.

Wiring:

```
24 Vac/dc
  G  G0
  Y1 Y2
  Y3 Y4
  NO NC COM
```

Supply  24 Vac/dc (22…28 V) < 2 W
VOC measurement
  range  450…2000 ppm (CO₂ equivalent)
  warm up time  15 min
  output  0…10 V < 2 mA = 0…2000 ppm
Temperature measurement
  range  0…±50 °C
  accuracy (25 °C)  ±0.5 °C
  output  0…10 V < 2 mA = 0…±50 °C
Humidity measurement (RH models)
  range  0…100 %rH
  accuracy (25 °C)  ±2 %rH
  output  0…10 V < 2 mA = 0…100 %rH
Control output  0…10 V < 2 mA
Measuring probe
  Ø 10 mm x 110 mm; duct insulation < 75 mm
Operating conditions
  temperature  0…+50 °C
  humidity  0…85 % RH (non cond.)
Housing  IP54
Dimensions (w x h x d)  105 x 104 x 155 mm
